

AY25 PROGRAM ASSESSMENT REPORT

v2026.1

Tracking Data

CIM code (e.g., ME-CM)	BS-AI-1
Program Name	Bachelor of Science in Artificial Intelligence
Assessment Year	AY25
Program Assessment Coordinator	Jacek Dzikowski
Year of Current Assessment Plan	2
No Assessment This Year per Plan	☐
LO(s) Assessed	3
Presented at program authority meeting date: <i>Please attach minutes</i>	

Methodology

For each LO and artifact assessed, please describe methodology used, and attach (as supplemental files during report submission) or insert here the rubric used. At minimum this should contain:

- a description of how the artifact is concordant with the LO
- a rubric describing the method used to place individual student in at least 3 assessment categories; {**D** Does not meet expectations, **M** Meets expectations *M*, **P** Proficient}

Learning objective LO #03:

Students will be able to design, implement, and evaluate a Machine Learning-based AI solution to meet a given set of computing requirements in the context of the program's discipline.

Artifact assessed:

A CS 481 (Artificial Intelligence Language Understanding) Programming Assignment which is a Python programming language implementation (source code) of Naive Bayes and k-Nearest Neighbors Machine Learning-based classification/sentiment analysis algorithms applied to publicly available text corpora. Collected from 5 (five) BS AI students enrolled in Fall 2024 CS 481 course.

Artifact description:

The assignment used for this assessment requires student to designing, implement, and evaluate a basic Machine Learning-based AI natural language model for text sentiment analysis. The task involves processing, in an efficient computational manner, a textual dataset (a corpus) to build a sentiment classifier.

The problem involves handling relatively large data sets, selecting and applying necessary preprocessing steps, as well as correctly implementing two mathematical sentiment classifier models (Naive Bayes and k-Nearest Neighbors) using the same data set.

Rubric:

	Assessment categories:		
	D (Does not meet expectation)	M (Meets expectations)	P (Proficient)
Program design [30%]	Students are able to produce computing formulations only for simple AI sub-problems.	Students are able to cast an AI problem as a computing problem, adequately decompose the problem into components, and formulate solution strategies.	Students are able to decompose an AI problem for efficient implementation.
Implementation of requirements [35%]	Significant project/implementation requirement violations.	Minor project/implementation requirement violations.	Implementation project/implementation meets all requirements.
Implementation correctness and evaluation [35%]	Students correctly mapped the AI technique to the problem and provided correct solution. Less than 80% of program behavior and output is as expected.	Students correctly identified the AI technique to the problem, but their solution was only partially correct. At least 80% of program behavior and output is as expected.	Students could recall the correct AI technique for the problem, but solution steps are incomplete. Program behavior and outputs are as expected

Results

Artifact samples

Attach artifact samples. You can paste them in here if feasible, attach them to the end of this report, or submit them as supplemental files when submitting your reports. For data sets with ≤ 10 students, provide 1 in each category, D,M,P, (unless the category is empty, if so state that). For programs with ≤ 20 , provide 2. For other programs provide 3. Please redact any personally identifiable information, PII (which includes names and A#s). Please convert your documents to PDFs.

Please use the following naming convention for your artifact files: **AY25_CIM-CODE_Name of Artifact.pdf**.

Artifact samples (Python source code py files) for selected assessed students provided as PDF files.

No sample for category D (Does not meet requirements).

No sample for category M (Meets requirements).

One student was not assessed due to early withdrawal from the course.

Data table

For each LO and provide a table pasted in from the downloadable [provided template](#), placing each student into the assessment categories (minimally {D, M, P}). You should collect and analyze data linked to student A#s locally, but please redact any personally identifiable information, PII (including names or A#s) in tables presented in this report. Provide a summary graph from the template presenting this distribution. You should also present additional analysis as deemed appropriate by the results seen, and the needs of the program.

Student classification into assessment categories (D: does not meet expectations, M: meets expectations, P: proficient):

A#	major	NAME	student	major	D/M/P
A0000001	BSAI		student 1	BSAI	P
A0000002	BSAI		student 2	BSAI	P
A0000003	BSAI		student 3	BSAI	P
A0000004	BSAI		student 4	BSAI	P
A0000005	BSAI		student 5	BSAI	P
A0000006	BSAI		student 6	BSAI	N

Student classification breakdown (D: does not meet expectations, M: meets expectations, P: proficient, N: not assessed):

D	0	0%	0	0%
M	0	0%	0	0%
P	5	100%	5	83%
N			1	17%
TOTAL			6	

Student classification breakdown bar chart (D: does not meet expectations, M: meets expectations, P: proficient, N: not assessed):

Description of findings

Summarize the discussion that occurred within the program authority when this was presented. Provide a short narrative interpreting the findings. Are there any areas of concern?

All assessed students met or exceeded expectations in the area defined by LO #03.

All assessed students displayed proficiency in analyzing a problem and correctly designed/implemented an AI solution and the corresponding algorithm(s) using efficient computing techniques and strategies.

Findings are based on a small sample and should be interpreted with caution.

Continuous Improvement, CI, plans

The purpose of assessment is to improve the quality of our educational programs. The most important part of the assessment cycle is how we use the data to improve our programs. Examine the data provided above describing student achievement, consider the root cause of any deficits, and if areas for possible improvement emerge, describe plans to achieve this improvement.

Prior CI plan impact

Also, please refer to the previous assessment report for the LOs assessed. Were any CI plans recommended? Were they implemented? Did the plans work (were improvements seen in this cycle)?

☒ no previous CI plans available

This cycle's CI plan

Describe any CI plans developed from this cycle's data, with

- Specific curricular or instructional changes in response to this assessment data,
- A timeline for implementation,
- As well a description of who will participate in and manage these plans

☒ After consideration and presentation to the program authority, no CI plans are recommended.
