

AY25 PROGRAM ASSESSMENT REPORT

v2026.1

Tracking Data

CIM code (e.g., ME-CM)	MAS-EMPM
Program Name	Master of Engineering Management, Project Management Track
Assessment Year	2024-2025
Program Assessment Coordinator	Ray Lemming, Brent Stephens
Year of Current Assessment Plan	2024-2025
No Assessment This Year per Plan	☐
LO(s) Assessed	2
Presented at program authority meeting date: <i>Please attach minutes</i>	n/a

Methodology

The Master of Engineering Management, Project Management Track, is a coursework-based graduate degree program oriented toward students who wish to gain introductory knowledge in the management of engineering projects. Project management is a critical requirement for successful industrial, construction, and other engineering projects.

Students with a variety of academic backgrounds are eligible to apply for the program, including those with undergraduate degrees in engineering disciplines (e.g., architectural, civil, mechanical, or environmental engineering) and non-engineering disciplines (e.g., architecture, construction management, or others).

The primary learning objectives for this program are for students to:

1. Demonstrate knowledge in, and an ability to apply technical skills to, fundamental problems in engineering project management
2. Demonstrate an ability to apply advanced technical and business knowledge and leadership skills to the management of engineering projects

Artifact(s) used to evaluate student learning:

- Performance on assignments and exams in one of the required courses in the program (typically EMGT 470)

Semester(s) in which artifacts are collected and assessed:

- End of each academic year

Sample size:

- Each student in the program who took the selected course

Data to report:

- Results are reported as statistical distributions (i.e., histograms) and summary statistics for the sample of students in each year on each performance indicator

Results

Data table

A total of 20 students were enrolled in the program in Fall 2024, all of whom who were pursuing the degree as a traditional master's student (none as a co-terminal student). Among these 20 students, 8 took EMGT 470 in this academic year (Spring 2025) and are thus used for program assessment in this cycle.

The following artifacts were used to assess performance toward each LO:

- LO #1 (Demonstrate knowledge in, and an ability to apply technical skills to, fundamental problems in engineering project management):
 - Mid-term and final exams
- LO #2 (Demonstrate an ability to apply advanced technical and business knowledge and leadership skills to the management of engineering projects):
 - Final report, which involves providing a project plan that is responsive to a request for proposals (RFP) for a housing development project

Table 1 shows results from the 8 students in the program across LOs #1 and #2. Scores range from 0 to 100 on a fractional basis. Definitions of proficiency levels are as follows: ≥ 0.9 (proficiency), 0.7-0.9 (meets expectations), < 0.7 (does not meet expectations). Distributions of proficiency levels are shown in Figure 1. Artifact samples are archived in Canvas.

Table 1. Results from evaluation rubric applied to LOs #1 and #2 for this academic year

student	LO1	LO1 - DMP	LO2	LO2 - DMP
student 1	0.88	M	0.82	M
student 2	0.92	P	0.85	M
student 3	0.96	P	0.87	M
student 4	0.75	M	0.72	M
student 5	0.89	M	0.00	D
student 6	0.95	P	0.97	P
student 7	0.89	M	0.78	M
student 8	0.92	P	0.80	M

Figure 1. Distribution of proficiency levels for LOs #1, #2, and #3 for this academic year

Description of findings

Key findings from this academic year and cohort include:

- All 8 students sampled met or exceeded expectations for LO #1, suggesting a high degree of proficiency in meeting this learning objective in this cycle.
- 7 out of 8 students sampled met or exceeded expectations for LO #2, with a moderate level of proficiency demonstrated overall (6 met expectations with 1 exceeding and 1 below).
 - The 1 student that was below expectations on LO #2 was primarily due to a failure to complete deliverables and also violations of the Illinois Tech Code of Academic Honesty

Prior CI plan impact

In the previous assessment report, institutional reviewers made several recommendations to improve upon our assessment plan, including converting to an updated format, indicating more clearly which artifacts are used and collected, and to improve upon our CI plan. None of the performance shown above raises major concerns for background preparation for the program or ability to execute in the program. The one student below expectations on LO #2 reflects a lack of understanding of Illinois Tech's Code of Academic Honesty in addition to some personal problems conveyed by the student. A remediation plan has been developed with this student.

This cycle's CI plan

1. In this cycle, we revised our learning objectives to two simply stated objectives, crafting language that allows for a broader characterization of the primary goals of the program. We also articulated a clearer plan for assessing the program using more than one course if needed in any given year. In this cycle, we selected EMGT 470 for assessment since its mid-term and final exams are aligned with preparation toward LO #1 while its final project deliverable is aligned with preparation toward LO #2, and all students in the program are required to take the course.
