

PROGRAM ASSESSMENT PLAN

Program information

- **Program name:** Master of Design Methods (MDM)
- **CIM code:** MAS-IDMT
- **CIM link:** <https://bulletinnext.iit.edu/programadmin/>
- **Academic Unit:** Institute of Design
- **Program assessment coordinator:** Matt Mayfield, mayfield@id.iit.edu
- **Effective date of plan:** Summer 2024

Learning Objectives (LO)

- 1. Identify opportunities through research and human-centered design principles.**
 - a. Able to organize analysis, principles, and implications
 - b. Able to develop model(s) of understanding through a human-centered lens
 - c. Able to define opportunities with a critical and constructive point(s) of view
- 2. Frame strategic innovations and the metrics of their success as part of a system**
 - a. Able to articulate how an opportunity fits into the desired future state of a system(s)
 - b. Able to list provocations, hypotheses, and/or questions to evaluate
- 3. Understand how to improve the capacity of responsible design and innovation in an organization**
 - a. Able to articulate perspectives from all stakeholders
 - b. Able to identify appropriate guiding principles
 - c. Able to communicate decisions and appropriate actions for impact

Curriculum Map

	Goal 1: Identify opportunities through research and human-centered design principles.	Goal 2: Frame strategic innovations and the metrics of their success as part of a system	Goal 3: Understand how to improve the capacity of responsible design and innovation in an organization
IDX 542 Analysis + Synthesis	I	I	I
IDN 508 Principles & Methods of User Research	A		
IDX 508 Modes of Human Experience	A		
IDN 519 Evidence-based Design	D	A	X
IDN 542 Behavioral Design	I		
IDN 571 Introduction to Systems Theory		X	X
IDN 534 Business Design		I	X
IDN 530 Innovation Frontiers	X	A	D
IDX 555 Metrics that Matter	X	A	
IDN 531 Adaptive Leadership			D
IDN 540 Implementing Innovation		D	A
IDN 556 Strategic Communication		X	A
IDX 511 Shaping Digital Futures	X	D	D

X = Contribute, I = Introduce, D = Development, A = Assessed

Assessment Schedule

Due to the current size of the program (<10 students). We will assess one goal each year with the intent of collecting evidence for all goals every year. This should provide us with enough evidence to properly assess each goal each year. This will also allow us to review all goals at least three times in a nine-year cycle.

Each assessment will also comment on the implementation of improvement plans from the prior year's assessment.

Academic year 2022/2023

Goal 1: Identify opportunities through research and human-centered design principles

Academic year 2023/2024

Goal 2: Frame strategic innovations and the metrics of their success as part of a system

Academic year 2024/2025

Goal 3: Understand how to improve the capacity of responsible design and innovation in an organization

Academic year 2025/2026

Goal 1: Identify opportunities through research and human-centered design principles

Academic year 2026/2027

Goal 2: Frame strategic innovations and the metrics of their success as part of a system

Academic year 2027/2028

Goal 3: Understand how to improve the capacity of responsible design and innovation in an organization

Assessment Process

Objectives and goals are assessed typically using final presentations or project summaries at the end of each course. Rubrics for assessment will be reflected in the assessment reports. Affected faculty will provide evidence at the end of each semester (course).

Ideally, select faculty will review submissions over the summer break to provide enough time to compile the assessment report and gather feedback from faculty and dean prior to university submission deadline on Oct 15.

All student submissions to every course identified for assessment in the curriculum map will be archived in the universities current LMS or protected school cloud drive. Specific location indicated on each assessment report.

Communication Plan

Assessment reports will be shared with all full-time faculty, dean, and associate dean typically over the winter break, but possibly earlier depending on the issues identified in the report. Specific and prioritized issues to be addressed will be shared and discussed during one or more of the weekly faculty meetings as well.

Continuous Improvement, CI, Plan

Improvement plans will be introduced to the faculty as soon as possible once identified. Depending on the issue, improvement will be either directed to appropriate and specific faculty/courses or shared with the full faculty to address in each of their courses school wide.

Improvements will be tracked via weekly faculty meetings (academic reflections are a part of every faculty meeting). And additional tracking will be done via the annual assessment reports.
