

Learning Assessment for Master of Public Works (2024)

October 2024

The Master of Public Works (MPW) program aims to achieve the following goal for student learning:

- **Learning Goal (G):** Demonstrating the ability to apply the knowledge essential to public works to real-world infrastructure engineering and management problems.

Performance Measures: Multiple performance measures are used to assess the extent to which the learning goal is achieved.

- Performance measures
 - PM₁: Clear comprehension of the application problem
 - PM₂: Format and completeness of solution: Problem definition, literature review, proposed methodology, application and discussion of findings, and conclusion
 - PM₃: Depth of investigation
 - PM₄: Ethical issues: Free of plagiarism and proper citing of existing work.

Performance Targets: Table 1 shows relative weights assigned to performance measures and performance target of student learning goal.

Table 1. Relative weights of learning goals and performance measures, and performance target

Relative weights	Goal				Overall
	PM ₁₁	PM ₁₂	PM ₁₃	PM ₁₄	
	0.20	0.15	0.40	0.25	
Total points	100	100	100	100	100
Performance target	85%	85%	85%	100%	
Target performance points	17.0	12.8	34	25	88.8

Data Sources for Assessment: Historically, student learning assessment has incorporated data from CAE 597: Special Problems, a course offered to students in the MPW program. However, there were no student enrollments in this course during Spring or Fall 2024.

Results, Findings, Discussions, and Improvement Plan: N/A.
