

PROGRAM ASSESSMENT REPORT

v2023.21

Tracking data

CIM code	MS-SAM
Program name	Master of Science in Sustainability Analytics and Management (SAM)
year	2024-2025
Program assessment coordinator	Roland Calia
Assessment plan year	2024-2025
No assessment this year per plan	☐
LO(s) assessed	Graduates will be able to gather and analyze relevant data needed to manage sustainability challenges.
Presented at program authority meeting date: <i>Please attach minutes</i>	TBD

Methodology

For each LO and artifact assessed, please describe the methodology used, and attach or insert the rubric used. At minimum this should contain:

- a description of how the artifact is concordant with the LO
- a description of the method used to place individual students in at least 3 assessment categories {**D** Does not meet expectations, **M** Meets expectations *M*, **P** Proficient} based on the artifact(s) assessed.

SUSTAINABILITY ANALYTICS AND MANAGEMENT: Graduates will be able to gather and analyze relevant data needed to manage sustainability challenges. (Three-dimensional assessment)

Construct	Exceeds expectations	Meets expectations	Does not meet expectations
Defines the scope of sustainability challenges	Defines scope of sustainability challenge considering economic, environmental and social dimensions of sustainability from perspective of the decision-maker and most important stakeholders	Defines scope of problem considering economic, environmental and social dimensions of sustainability from perspective of the decision-maker	Narrowly defines scope of challenge only considering environmental concerns
Identifies data required to analyze problem	Identifies and documents what categories of data are required to analyze the defined problem	Identifies what categories of data are required to analyze the defined problem	Misses important categories of data required to analyze the defined problem
Collects required data from relevant primary, secondary and/or tertiary sources	Identifies relevant primary, secondary, and/or tertiary sources and collects required data from those sources, correctly documenting uncertainties and assumptions in the data	Identifies relevant primary, secondary and/or tertiary sources and collects required data from those sources	Fails to identify all primary, secondary and/or tertiary sources and fails to collect data from those sources
Utilizes appropriate tools for analyzing data	Identifies and utilizes the most appropriate tool for analyzing data and assesses the limitations of the analysis	Identifies and utilizes the most appropriate tool for analyzing the data	Fails to identify any appropriate tool for data analysis, or is unable to demonstrate use of the tool for data analysis
Reports results of analysis in order to address sustainability challenges	Prepares a thorough report on how challenges were defined, the data were gathered, analyzed, and the relevance of the analysis to the defined challenges	Sufficiently reports how the data were gathered, analyzed, and relevance of the analysis to the defined challenge	Fails to report how the data were gathered, analyzed, and relevance of the analysis to the defined challenge

Results

Artifact samples

Attach artifact samples. For data sets with ≤ 10 students, provide 1 in each category (unless the category is empty, if so state that). For programs with ≤ 20 , provide 2. For other programs provide 3.

Sample 2 Memo.docx

Sample 1 Corporate
Near Term Tool.xlsx

Sample 4 Memo.docx

Sample 3 Corporate
Near Term Tool.xlsx

Data table

For each LO assessed provide a table pasted in from the provided [recommended reporting template](#) placing each student into the assessment categories (minimally {D, M, P}). Provide a summary graph from the [recommended reporting template](#) (provided separately) presenting this distribution. You may also present additional analysis as deemed appropriate by the results seen and the needs of the program.

Course: SAM 503: ESG Analytics and Management

Goal: SUSTAINABILITY ANALYTICS AND MANAGEMENT: Graduates will be able to gather and analyze relevant data needed to manage sustainability challenges.

Fall 2024

Criteria (List each construct)

Construct

	Count	Exceeds Expectations	Meets expectations	Does not meet expectation
Defines the scope of sustainability challenges	20	25%	50%	25%
Identifies data required to analyze problem	20	30%	55%	15%
Collects required data from relevant primary, secondary and/or tertiary sources	20	10%	85%	5%
Utilizes appropriate tools for analyzing data	20	25%	75%	0%
Reports results of analysis in order to address sustainability challenges	20	20%	65%	15%

Description of findings

Summarize the discussion that occurred within the program authority when this was presented. Provide a short narrative interpreting the findings. Are there any areas of concern?

The average percentage of student assignments successfully exceeding or meeting expectations was 88%, well above the 80% threshold target. The only area where there could be some review of course content was the “defines scope of sustainability challenges” construct, where 25% of student assignments did not meet expectations.

Continuous Improvement, CI, plans

The purpose of assessment is to improve the quality of our educational programs. The most important part of the assessment cycle is how we use the data to improve our programs. Examine the data provided above describing student achievement, and if areas for possible improvement emerge, describe plans to achieve this improvement.

We will discuss how to improve student understanding of defining the scope of sustainability challenges in the SAM 503 and other courses.

We intend to expand the assessment process by assessing assignments in SAM classes using the 2 Stuart common goals: technical proficiency and communications.

Prior CI plan impact

Refer to the previous assessment report for this LO. Were any CI plans recommended? Were they implemented? Did it work (were improvements seen in this cycle)?

☐ no previous CI plans available

The results in the 2023-2024 academic year indicated that over 73% of student assignments on average successfully met or exceeded expectations. So, the results from the 2024-2025 academic year, when 88% of average percentage of student assignments successfully exceeded or met expectations, represented a marked improvement.

This cycle's CI plan

Describe any CI plans developed from this cycle's data, as well as the strategy developed to implement these plans.

☐ After consideration and presentation to the program authority, no CI plans are recommended.

We intend to expand the assessment process by assessing assignments in SAM classes using the 2 Stuart common goals: technical proficiency and communications.
